

Source code

```
class Example {  
    public static void main(String[] args) {  
        /* A code example */  
    }  
}
```

You can also load a source code file directly from a document or an URL:

```
class Example:  
    """A code example"""  
    def hello():  
        return 'Hello_world.'
```

You can use the `\texttt{...}` command for quick inline code snippets without any highlighting. If you need syntax highlighting, use the `\lstinline[]|...|` command. This will look like this: `class Example {...}`
