Properly formatted source code

```
1  class Example {
2      public static void main(String[] args) {
3          int i = 123;
4          /* A code example */
5      }
6  }
```

You can also load a source code file directly from a document or an URL:

```
1  class Example:
2      """A code example"""
3      def hello():
4          return 'Hello world.'
```

To manually setup the font-size of the listings font, use this syntax:
`basicstyle = \fontsize{9}{1.4em}\ttfamily`

You can use the `\texttt{...}` command for quick inline code snippets without any highlighting. If you need syntax highlighting, use the `\lstinline[]|...|` command. This will look like this: `class Example {...}`

Find all available options in the documentation, page 6ff:
